TIPS ON HOW TO BE MORE SUSTAINABLE AS A CHOIR

Digital Resources: Use digital sheet music and rehearsal tracks to reduce paper usage and transportation needs.

Green Transportation: Encourage carpooling or public transportation for choir members to reduce carbon emissions.

Local Performances: Choose local venues and opportunities to reduce travel-related emissions.

Recycle and Compost: Set up recycling and compost bins in rehearsal spaces and performance venues.

Digital Promotion: Promote your choir's events and activities through digital channels to reduce paper flyer distribution.

Green Partnerships: Collaborate with environmentally conscious organizations and venues.

Community Engagement: Use your choir's platform to promote environmental awareness and engage in local sustainability initiatives.

Carbon Offsets: Consider offsetting your choir's carbon footprint by investing in carbon offset programmes.

Educational Efforts: Educate choir members and audiences about sustainable practices and their importance.

Reduce Print: Use projector screens, encourage tablet usage for scores, and/or use loaner copies instead of printing every singer a copy.

Reuse: Encourage reusable water bottles and KeepCups for water, coffee, and tea.

By incorporating these sustainable practices into your choir's operations, you can contribute to a greener and more environmentally responsible future while making beautiful music.
